

AI Voice & Conversational Sales

When the follow-up needs an actual conversation

Email and LinkedIn sequences only go so far — some qualification and support conversations still need a live back-and-forth. This category covers the voice AI infrastructure and agent platforms teams use to build automated phone or voice-chat experiences, from qualifying inbound calls to multilingual support.

Uplift AI

VOICE AI INFRASTRUCTURE

A voice AI platform specializing in natural-sounding, low-latency text-to-speech and voice agents for South Asian languages (including Urdu and Hindi). Sales and support teams use it as the voice layer underneath a conversational agent when they need a multilingual, regionally accurate voice rather than a generic English-only one.

Best for: teams needing South Asian language voice agents **Starting tier:** usage-based API pricing

Bland AI

AI PHONE AGENTS

A developer-focused platform for building AI phone agents that can make or take calls at scale — used for outbound qualification calls, appointment reminders, and inbound call handling.

Best for: teams building custom outbound/inbound call flows **Starting tier:** usage-based (per-minute) pricing

Retell AI

VOICE AGENT PLATFORM

A platform for building and deploying voice AI agents with low-latency conversation handling, aimed at teams that want to prototype a voice agent quickly and plug it into their existing phone or CRM stack.

Best for: product/eng teams prototyping voice agents **Starting tier:** usage-based API pricing

Buyer's note: voice AI is the newest and fastest-moving category in this guide. Features, language coverage, and pricing models change quickly — test with a real call script and real accents/languages from your audience before rolling out to production.
